

Upload Excel. Validate instantly. Store clean data.

A powerful Excel processing pipeline built with Spring Boot and Angular. Parse, validate, and store structured data with speed, accuracy, and reliability.

- ✓ Row-level validation with detailed error feedback
- ✓ Fast processing using Apache POI
- ✓ Seamless storage with PostgreSQL

Capabilities

What you get

Three core features designed to handle your data workflow.

Upload

Excel file handling made simple

Drop your .xlsx files and let the system parse them instantly.

Explore

Arrow →

Data validation that catches errors

Row-by-row validation ensures your data stays clean.

Arrow →

Reliable error handling and feedback

Know exactly what went wrong and fix it fast.

Section 1

Section 2

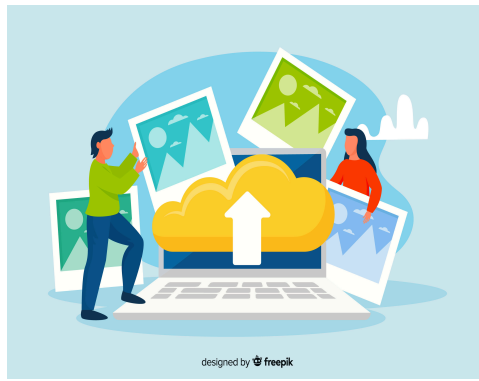

Section 3

Process

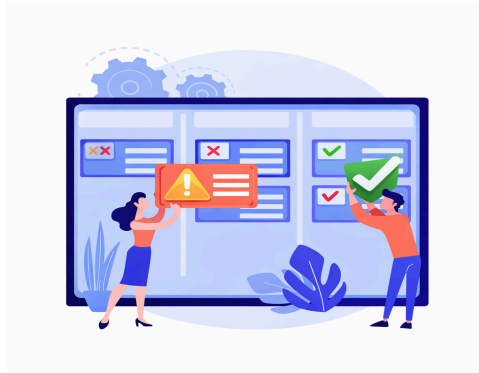

How it works in three steps

The workflow is straightforward. Upload your file, let the system validate it, and watch your data get stored.

Select and upload your file

Choose your Excel file from your computer and send it to the server.

System validates every row

Apache POI parses the data while custom validators check each entry.

Database

Data gets stored in the database

Valid records are persisted to PostgreSQL for immediate access.

Results

Built for speed, accuracy, and reliability

From parsing Excel files with Apache POI to validating each row and persisting clean data — these numbers reflect real system performance.

Explore

Arrow →

99.8%

Validation accuracy

Smart row-level validation ensures only clean data enters your system.

Excel Parsing (Apache POI)

50ms

Avg processing time

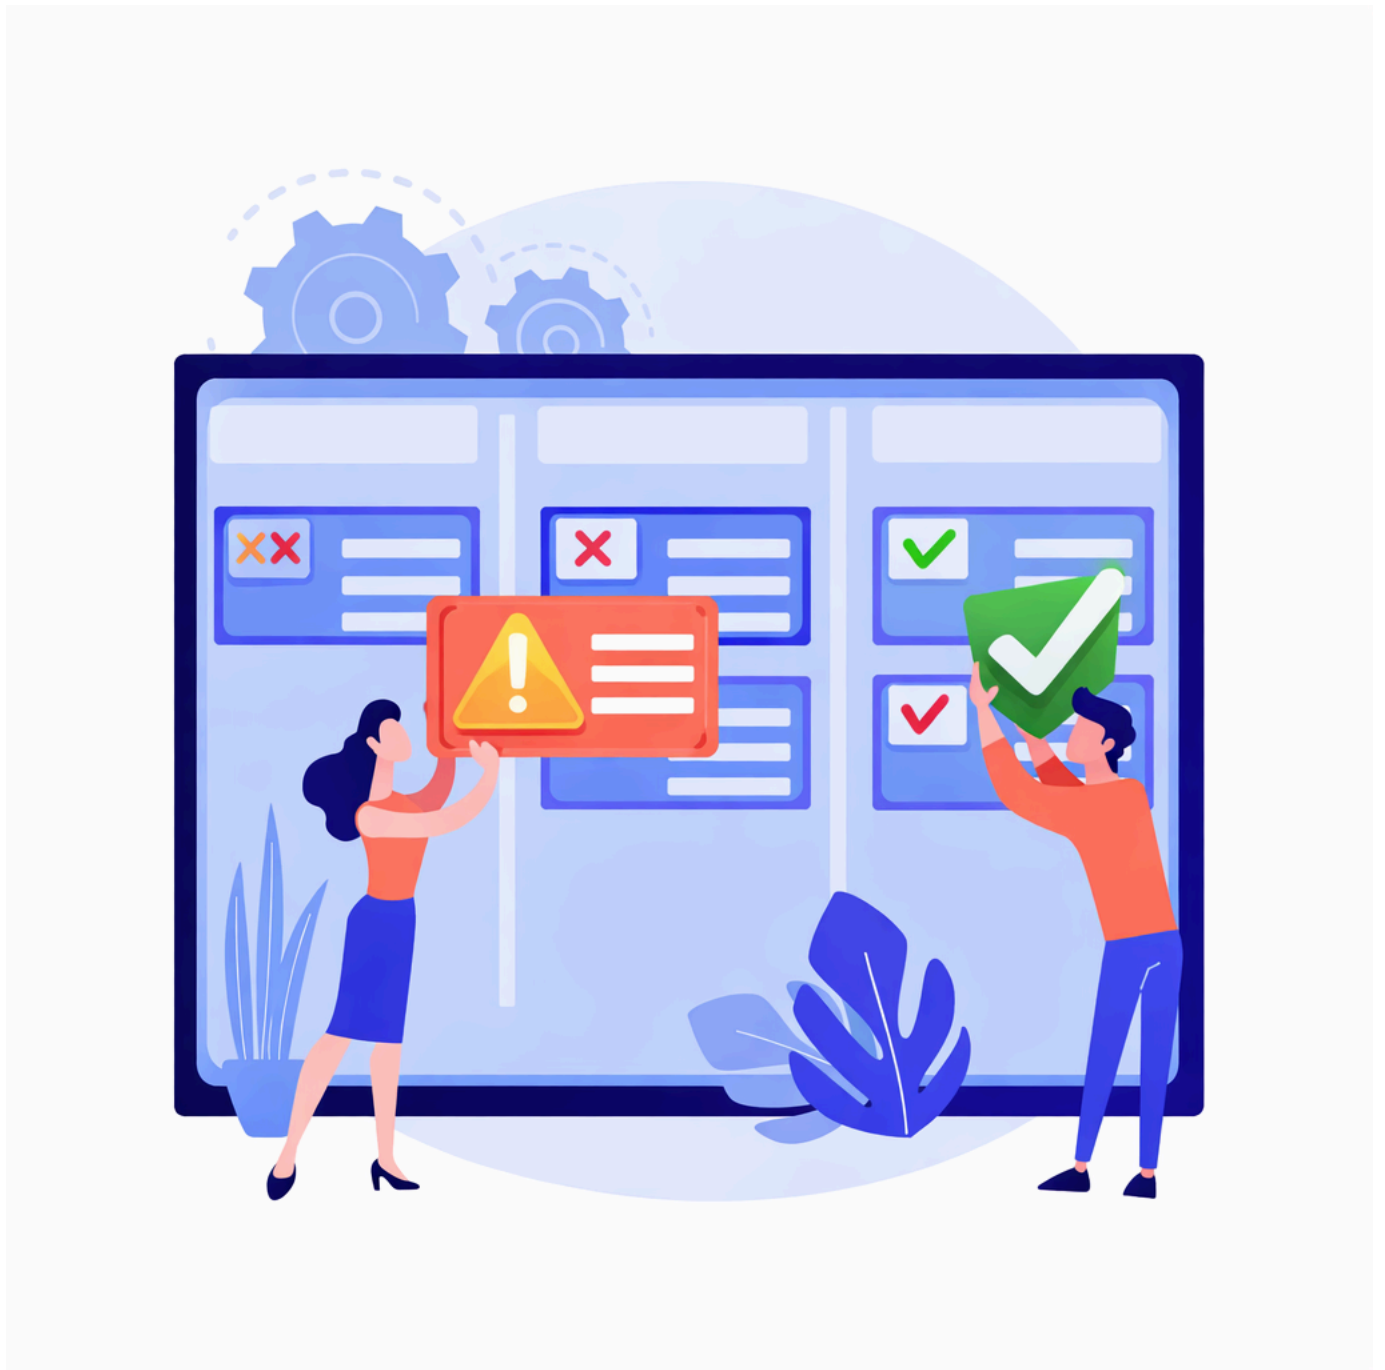

Fast backend processing powered by Spring Boot.

10+

Supported formats

Flexible structure handling for different Excel schemas.

PostgreSQL Storage

✓ Row-by-row validation

Every entry gets checked against your requirements before storage.

⚠ Detailed error reports

Know exactly which rows failed and why they didn't pass.

📄 Clean data guaranteed

Only valid records make it to your database. No more dirty data headaches.
